As an OTR driver, XM radio has been the best tool for the driver since cellphones. I find it amusing that the two representatives from MS & TX have a problem with me knowing of bad weather & traffic in their states before I get there and make it even worse.

XM Radio allows me to know hours in advance if I need to reroute and not make the traffic situation even worse, while the local radio stations cannot let me know of it 100 - 150 miles before I get there!

Leave XM Radio alone gentlemen, it is a service I pay for to help me survive 130,000 miles a year and to make my job safer!

NAB's problem is, XM Radio does it better.
